

ResponseOS Communications Stack

Vendor Selection & Architecture Analysis

Prepared for: Audio Jones / ResponseOS

Date: June 2026

Platform: AI Receptionist SaaS -- South Florida

CONFIDENTIAL -- Strategic Planning Document

SECTION 1 -- EXECUTIVE SUMMARY

ResponseOS is an AI Receptionist SaaS platform purpose-built to deliver voice AI, SMS automation, lead qualification, and appointment scheduling for SMB clients across the United States. As the platform scales from MVP to enterprise, the communications infrastructure layer becomes a primary cost center, reliability dependency, and competitive differentiator. This report evaluates 15+ vendors across the CPaaS, AI agent, SMS, and multi-tenant telephony landscape to deliver a definitive architecture recommendation.

Architecture Recommendation

The clear winning architecture for ResponseOS combines Telnyx as the primary communications infrastructure layer with Vapi or Retell AI as the AI agent orchestration layer, and Sendblue as an optional iMessage channel for US-based clients. This stack delivers the lowest unit economics, highest reliability, and deepest AI native integration available in the market.

Key Findings

- * Telnyx advantage: 2x cheaper SMS, 3.5x cheaper voice vs Twilio PAYG rates. Private backbone delivers <200ms AI voice latency. Native GPU inference, STT, and TTS co-located with telephony. 99.999% SLA with 24/7 phone support. True CPaaS built for developers and SaaS builders.
- * Twilio single-vendor risk: A2P 10DLC arbitrary rejection issues, pricing that does not scale aggressively at volume, ecosystem dependency risk, and community-reported support degradation. Twilio remains the best secondary/failover choice due to ecosystem breadth, but should not be the primary infrastructure for a cost-sensitive SaaS platform.
- * GoHighLevel LC Phone reality: GHL LC Phone is Twilio-based under the hood -- every SMS and voice minute goes through Twilio infrastructure at Twilio rates, passed through GHL with a markup. The GHL SaaS Pro plan (\$497/mo) adds overhead before a single client is served. Bypassing GHL for primary infrastructure and using Telnyx directly delivers superior economics at scale.
- * SMS-only platforms eliminated: MessageDesk, TextMagic, SimpleTexting, and ProTexting are end-user SMS tools designed for business users -- not infrastructure APIs for SaaS builders. None support multi-tenant subaccounts, programmatic number provisioning, or webhook-based AI integration at the level required for ResponseOS.
- * iMessage channel opportunity: Sendblue provides a unique iMessage/RCS channel for US AI agents. With 57% iOS market share in the US, iMessage response rates are significantly higher than standard SMS. This creates a premium channel add-on opportunity for ResponseOS clients.
- * AI agent layer: Vapi (developer-first, 6 SDKs, extensive LLM compatibility) and Retell AI (20 free concurrent calls, production-ready) are the two recommended AI orchestration layers. Both integrate natively with Telnyx SIP trunks via BYOC (Bring Your Own Carrier).

Strategic Recommendation

Primary stack: Telnyx + Vapi. Secondary: Twilio account maintained for failover and platforms that require Twilio compatibility. SMS channels: Telnyx A2P primary + Sendblue iMessage for US clients. The ResponseOS platform should implement a Communications Abstraction Layer -- a code wrapper that decouples the product from any single vendor, enabling provider swaps without client-facing changes. This abstraction layer is the platform's primary infrastructure moat.

At 100 clients (5,000 SMS/mo, 2,000 voice minutes/mo each), Telnyx infrastructure costs ~\$54,300/year vs ~\$110,820/year for Twilio -- an annual saving of \$56,520 (51% cheaper). At a \$497/mo SaaS pricing tier, Telnyx-based gross margin is 90.9% vs 81.4% for Twilio -- a 9.5 percentage point advantage that compounds aggressively as the client base grows.

SECTION 2 -- VENDOR COMPARISON MATRIX (PRIMARY VENDORS)

Vendor	Founded	Size	Funding	Voice	SMS	API Quality	AI Agent Compatible	White-Label / Multi-Tenant	Best Use Case
Twilio	2008	~6,500 employees	NYSE: TWLO \$4.17B FY2024	Full CPaaS	Full A2P	Best-in-class	Native (Vapi/Retell/Blind/OAI)	Subaccounts only	Voice AI backbone; best ecosystem
Sent.dm	2024	~20 employees	\$4.2M seed	None	SMS / WhatsApp / RCS	Developer-focused	No native	Not documented	Cost-optimized multi-channel SMS routing
Sendblue	2020	~15 employees	Bootstrapped / small funding	FaceTime Audio only	iMessage / RCS / SMS	Good (6 SDKs)	Webhook-based	None	iMessage channel for US AI agents
LinqApp	2022	~30 employees	\$20M Series A (Feb 2026)	Limited	iMessage / RCS / SMS	Developer-focused	Webhook-based	Not documented	AI-first iMessage competitor to Sendblue (higher cost)
ProTexting	2010	~15 employees	Bootstrapped	None	SMS / MMS marketing	Basic	None	Full reseller program	SMS marketing agencies -- NOT for AI Receptionist SaaS

SECTION 3 -- BENCHMARK VENDOR COMPARISON MATRIX

Vendor	Type	Voice	SMS	Dev API	Multi-Tenant SaaS	AI Native	Price Tier	SaaS Fit (1-10)
Telnyx	CPaaS / Carrier	Full + AI native	Full A2P	Excellent	Full sub-account	Yes (own GPU/STT/TTS)	Lowest	9/10
OpenPhone / Quo	Business phone	Full	Yes	Limited	No	Sona AI agent incl.	\$19-33/user	2/10 (end-user)
JustCall	Cloud phone	Full	Yes	Good	Limited	\$0.99/min add-on	\$29-89/user	3/10
RingCentral	Enterprise UCaaS	Full	Yes	Good	No	Add-on (+\$60/user)	\$20-35/user + AI	2/10
GoHighLevel LC Phone	Agency SaaS	Twilio-based	Twilio-based	GHL workflow-based	Full (SaaS Pro \$497)	Via GHL workflows	\$0.00747/SMS \$0.0166/min	6/10 (agency only)
MessageDesk	Team SMS inbox	None	Yes	Basic	No	No	\$29-99/user	1/10
TextMagic	SMS marketing	None	Yes (\$0.049/SMS)	Basic	No	No	PAYG \$0.049/SMS	1/10
SimpleTexting	SMS marketing	None	Yes	Basic	No	No	~\$0.055/SMS	1/10

SECTION 4 -- FEATURE MATRIX (TWILIO vs TELNYX vs GOHIGHLEVEL)

Feature	Twilio	Telnyx	GoHighLevel

SECTION 5 -- COST ANALYSIS MATRIX

Pricing Reference Data

Provider	SMS (per segment)	Voice Outbound	Voice Inbound	Number / mo	A2P 10DLC
Twilio	\$0.0083	\$0.014/min	\$0.0085/min	\$1.15	\$10/mo/campaign
Telnyx	\$0.004 + ~\$0.003 carrier avg	\$0.004/min (SIP total)	\$0.004/min (SIP total)	~\$1.50	~\$7/mo (lower carrier fees)
GHL LC Phone	\$0.00747	\$0.0166/min	\$0.01165/min	\$1.15	\$10/mo + GHL SaaS Pro \$497

Scenario A -- 10 Clients

1 number per client, 1,000 SMS/mo, 500 voice min/mo per client

Provider	Numbers	SMS Cost	Voice Cost	A2P	Total / mo	Annual
Twilio	\$11.50	\$113.00	\$59.00	\$100.00	~\$284/mo	~\$3,408/yr
Telnyx	\$15.00	\$70.00	\$20.00	\$7.00	~\$112/mo	~\$1,344/yr
GoHighLevel	\$497 base + \$11.50	\$74.70	\$72.45	\$100.00	~\$755/mo	~\$9,060/yr

Scenario B -- 50 Clients

2 numbers per client, 2,000 SMS/mo, 1,000 voice min/mo per client

Provider	Numbers	SMS Cost	Voice Cost	A2P	Total / mo	Annual
Twilio	\$57.50	\$1,130.00	\$617.50	\$500.00	~\$2,305/mo	~\$27,660/yr
Telnyx	\$75.00	\$700.00	\$200.00	\$35.00	~\$1,010/mo	~\$12,120/yr
GoHighLevel	\$497 base + \$57.50	\$747.00	\$754.75	\$500.00	~\$2,556/mo	~\$30,672/yr

Scenario C -- 100 Clients

5,000 SMS/mo, 2,000 voice min/mo per client

Provider	Numbers	SMS Cost	Voice Cost	A2P	Total / mo	Annual
Twilio	\$115.00	\$5,650.00	\$2,470.00	\$1,000.00	~\$9,235/mo	~\$110,820/yr
Telnyx	\$150.00	\$3,500.00	\$800.00	\$75.00	~\$4,525/mo	~\$54,300/yr
GoHighLevel	\$497 base + \$115.00	\$3,735.00	\$3,023.00	\$1,000.00	~\$8,370/mo	~\$100,440/yr

Cost Summary Comparison

Provider	Scenario A (10 clients) Monthly	Scenario B (50 clients) Monthly	Scenario C (100 clients) Monthly	Scenario C Annual
Twilio	~\$284	~\$2,305	~\$9,235	~\$110,820
Telnyx	~\$112	~\$1,010	~\$4,525	~\$54,300
GoHighLevel LC Phone	~\$755	~\$2,556	~\$8,370	~\$100,440

SECTION 6 -- UNIT ECONOMICS & SAAS MARGIN ANALYSIS

Per-Client Infrastructure Cost by Scenario

Scenario	Clients	Twilio / client	Telnyx / client	GHL / client
Scenario A	10	\$28.40	\$11.20	\$75.50
Scenario B	50	\$46.10	\$20.20	\$51.12
Scenario C	100	\$92.35	\$45.25	\$83.70

SaaS Pricing Gross Margin Model -- Telnyx Stack, Scenario B (50 clients)

Infrastructure baseline: \$1,010/mo for 50 clients = \$20.20/client. All figures are gross margin on the communications infrastructure layer only (excludes other OpEx such as compute, headcount, and sales).

SaaS Price / mo	Revenue (50 clients)	Infra Cost	Gross Margin \$	Gross Margin %
\$297	\$14,850	\$1,010	\$13,840	93.2%
\$497	\$24,850	\$1,010	\$23,840	95.9%
\$997	\$49,850	\$1,010	\$48,840	97.9%
\$1,497	\$74,850	\$1,010	\$73,840	98.6%

Telnyx vs Twilio Margin Delta at Scale -- 100 Clients (Scenario C)

Metric	Twilio	Telnyx	Delta (Telnyx advantage)
Annual infra cost	\$110,820	\$54,300	\$56,520 savings (51% cheaper)
Gross margin at \$497/mo	81.4%	90.9%	+9.5 percentage points
Annual revenue at \$497/mo (100 clients)	\$596,400	\$596,400	Same revenue base
Annual gross profit	~\$485,580	~\$542,100	+\$56,520/year retained

Cost per AI Voice Minute -- Fully Loaded Stack

Component	Telnyx Stack	Twilio Stack
Carrier (SIP/Voice)	\$0.004/min	\$0.014/min
AI Agent Layer (Vapi)	\$0.050/min	\$0.050/min
Deepgram STT	\$0.0074/min	\$0.0074/min
GPT-4o (LLM)	\$0.030/min	\$0.030/min

Component	Telnyx Stack	Twilio Stack
ElevenLabs TTS	\$0.020/min	\$0.020/min
TOTAL per AI voice minute	~\$0.111/min	~\$0.121/min

Fully loaded AI receptionist cost per minute: ~\$0.10-\$0.13/min depending on LLM model, TTS voice, and call pattern. This can be priced at \$0.25-\$0.50/min to enterprise clients with 60-75% gross margin on voice minutes alone.

SECTION 7 -- SCALABILITY ANALYSIS

Telnyx Scalability

- * Private backbone with auto-scaling -- no manual capacity planning required for voice or SMS channels.
- * Volume discounts activate at 500,000+ SMS/month, reducing per-segment cost further below the already-competitive \$0.004 base rate.
- * Dedicated Customer Success Manager assigned at volume thresholds -- no shared support queue.
- * Pure usage-based pricing model -- no per-seat tax, no per-agent fee, no minimum monthly commitment beyond number costs.
- * Elastic SIP Trunks support unlimited concurrent calls (no soft limits), critical for ResponseOS AI agents handling simultaneous inbound calls across hundreds of client accounts.

Twilio Scalability

- * Proven at massive scale -- Uber, Airbnb, WhatsApp (pre-Meta acquisition) all built on Twilio infrastructure.
- * Pricing does NOT scale down aggressively at volume for PAYG accounts. Volume contracts require enterprise negotiation and minimum spend commitments.
- * A2P 10DLC compliance overhead compounds at scale: each new client business requires a new campaign registration (\$10/mo), creating a recurring administrative burden that grows with the client count.
- * Twilio subaccount system exists but usage metering and billing attribution require custom implementation -- not built-in.
- * Rate limiting on high-volume accounts is a common complaint in the developer community, requiring dedicated support escalation.

Multi-Tenant Architecture Considerations

- * Per-client subaccounts are mandatory for SMS reputation isolation -- shared SMS pools from a single account contaminate all clients if one client triggers spam filters or gets blocked by carriers.
- * Telnyx subaccount system provides full API-level isolation: separate API keys, separate number pools, separate usage reporting, and separate compliance profiles per subaccount.
- * Twilio subaccount system provides similar isolation but requires more manual configuration and lacks the built-in usage metering that Telnyx offers.
- * GoHighLevel LC Phone wraps Twilio subaccounts inside GHL's abstraction layer -- this means double overhead and Twilio's underlying limitations still apply.

Concurrent Call Capacity

Telnyx claims unlimited concurrent calls on Elastic SIP Trunks, which is critical for AI Receptionist SaaS. During peak hours, a 100-client platform could face 50-200 simultaneous inbound calls. Twilio has soft concurrency limits on standard accounts that require proactive support engagement to

raise. This is a significant operational risk for high-volume ResponseOS deployments.

Geographic Expansion

Both Telnyx and Twilio support 100+ countries. Telnyx holds carrier licenses in 40+ countries and owns its network infrastructure in key markets, resulting in lower latency and more predictable pricing internationally. This matters for ResponseOS enterprise clients with multi-location businesses -- a dental group with 20 locations across 5 states, or a franchise brand with international presence, requires consistent AI receptionist performance across all locations. Telnyx's owned infrastructure in major markets provides a material advantage over Twilio's more reseller-dependent international model.

SECTION 8 -- RISK ANALYSIS MATRIX

Risk	Provider Exposed	Severity	Likelihood	Mitigation
A2P 10DLC Arbitrary Rejection	Twilio	High	High	Use Telnyx; maintain separate subaccounts per client
Shared SMS Reputation Contamination	Twilio / GHL	High	Medium	Per-client subaccounts + Telnyx isolation architecture
Vendor Price Increase	Twilio	Medium	High	Multi-vendor architecture; negotiate Telnyx contract pricing at volume
Carrier Blocking (spam filters)	All SMS	High	Medium	A2P registration + send warm-up + throttling + opt-out mgmt
AI Platform Outage (Vapi/Retell)	Vapi / Retell	High	Low	Redundant AI layer -- Retell AI as hot backup for Vapi
Platform Concentration (single vendor)	Any	High	Medium	Implement ResponseOS Communications Abstraction Layer
10DLC Fast Track Upsell Pressure	Twilio	Medium	High	Migrate primary SMS infrastructure to Telnyx
GHL LC Phone Lock-in	GoHighLevel	Medium	High	Do not build core infrastructure on GHL LC Phone
TCPA / Regulatory Compliance	All	High	Medium	A2P registration + opt-out management + consent tracking
Number Reputation (AI outbound spam)	All	High	Medium	STIR/SHAKEN + dedicated numbers for AI vs human calling

Risk Summary

Category	Vendor(s)	Assessment
Highest Risk Vendors	Twilio, GoHighLevel LC Phone	Twilio: A2P rejection issues + pricing at scale. GHL: Twilio dependency + lock-in.

Category	Vendor(s)	Assessment
Most Stable Vendors	Telnyx, Bandwidth	Telnyx: owned infrastructure + 99.999% SLA. Bandwidth: enterprise but no AI native.
Best Long-term Bet	Telnyx	Lowest cost, highest SLA, private backbone, native AI stack, growing ecosystem.

SECTION 9 -- STRATEGIC RECOMMENDATION

Best Overall Choice	Winner: Telnyx	Carrier-grade infrastructure, lowest cost, native AI voice stack, 99.999% SLA, private backbone for lowest latency, full subaccount model, true CPaaS for builders.
Best Low-Cost Choice	Winner: Telnyx	2x cheaper SMS, 3.5x cheaper voice vs Twilio PAYG. Volume discounts at 500K+ SMS/mo. No per-seat pricing tax -- pure usage-based model scales perfectly with SaaS revenue.
Best Enterprise Choice	Winner: Telnyx (+ Twilio backup)	Single BAA for HIPAA. SOC 2 Type II, PCI DSS, ISO 27001 certified. Licensed carrier in 40+ countries. Dedicated CSM at volume. Twilio maintained as secondary for ecosystem compat.
Best AI-Native Choice	Winner: Telnyx	Only carrier running GPU inference + STT/TTS + telephony on same private network. Claimed <200ms AI voice latency. Native integration with Vapi, Retell, Bland, OpenAI Realtime.

Recommended Hybrid Architecture

Telnyx (primary) + Twilio (SMS fallback / secondary) + Vapi or Retell AI (agent layer) + Sendblue (iMessage channel)

- * Telnyx handles all voice (inbound/outbound/AI) and primary SMS -- lowest cost, highest SLA, private backbone.
- * Twilio maintained as secondary account for SMS failover and any platform integrations that require Twilio compatibility.
- * Vapi or Retell AI orchestrates AI voice agent conversations on top of Telnyx SIP via BYOC -- battle-tested, developer-first.
- * Sendblue adds iMessage channel for US-based clients. With 57% iOS market share, iMessage response rates are significantly higher than standard SMS.
- * Communications Abstraction Layer in ResponseOS code decouples the platform from any single vendor -- providers can be swapped without client-facing changes. This is the platform's primary infrastructure moat.

SECTION 10 -- RESPONSEOS INTEGRATION RECOMMENDATION

Phase 1 Roadmap -- Current MVP

Feature	Architecture	Vendors
AI Receptionist	Telnyx inbound number -> AI agent -> CRM webhook	Telnyx + Vapi or Retell AI
Missed Call Text Back	Telnyx webhooks -> SMS automation trigger	Telnyx SMS

Feature	Architecture	Vendors
Lead Qualification	Retell AI / Vapi with custom LLM prompts + structured output	Vapi / Retell + GPT-4o
Appointment Scheduling	Vapi tool calling -> Cal.com or GHL calendar API	Vapi + Cal.com / GHL
CRM Updates	Webhook relay -> CRM API (GHL, HubSpot, custom)	ResponseOS event bus

Phase 2-3 Roadmap -- Scale & Enterprise

Feature	Architecture	Timeline
AI Voice Outbound Campaigns	Telnyx outbound SIP -> Vapi/Retell outbound campaign API	Phase 2
Business Memory Systems	Call transcriptions -> vector DB -> personalized agent memory per client	Phase 2
Multi-location Support	Per-location phone numbers via Telnyx subaccounts, separate A2P campaigns	Phase 2
Revenue Attribution	Call/SMS tracking per lead source -> attribution dashboard	Phase 2
Multi-channel SMS (WhatsApp/RCS)	Sent.dm integration for WhatsApp and RCS routing (watch list vendor)	Phase 3
Enterprise SIP Infrastructure	ResponseOS-owned SIP trunks via Telnyx volume contract	Phase 3

Architecture Diagram

```

Client Phone -> [Telnyx SIP] -> [ResponseOS Routing Layer] -> [Vapi/Retell AI Agent] -> [LLM
(OpenAI/Anthropic)] -> [CRM/Calendar APIs]
?
[SMS: Telnyx A2P] -> [Sendblue iMessage (US clients)]
?
[ResponseOS Dashboard (per-tenant subaccount)]

```

Technical Implementation Notes

- * Use Telnyx Elastic SIP Trunks per client subaccount for complete call path isolation and per-client billing.
- * Configure Vapi BYOC (Bring Your Own Carrier) with Telnyx SIP credentials for AI voice calls -- this routes AI voice traffic over Telnyx's private backbone.
- * ResponseOS wraps Telnyx + Vapi APIs in a unified client management layer -- one API surface, multiple provider backends.
- * Implement per-client API key isolation at the subaccount level -- no shared credentials across client accounts.

- * Webhook relay architecture: Telnyx events -> ResponseOS event bus -> client CRM. This decouples CRM integrations from telephony layer.
- * All AI voice calls must be STIR/SHAKEN compliant -- register numbers for attestation to prevent downstream spam labeling.
- * Implement opt-out management at the ResponseOS platform level (not client-level) to ensure TCPA compliance across all SMS channels.

SECTION 11 -- FINAL VENDOR RANKING (1-10 Scale)

Rank	Vendor	Score	SaaS Fit	AI Fit	Cost	Reliability	Notes
1	Telnyx	9.2/10	[YES] Excellent	[YES] Native AI	[YES] Lowest	[YES] 99.999%	Best overall for ResponseOS
2	Vapi (AI layer)	8.5/10	[YES] Developer-first	[YES] Core product	[PART] Mid	[YES] Good	Best AI orchestration layer
3	Retell AI	8.3/10	[YES] Production-ready	[YES] Core product	[PART] Mid	[YES] Good	20 free concurrent calls
4	Twilio	8.1/10	[YES] Good	[YES] Full compat	[PART] Higher	[YES] 99.95%	Best ecosystem; SMS issues at scale
5	Bland AI	7.8/10	[PART] Enterprise skew	[YES] Core product	[PART] Mid	[YES] Good	Enterprise/HIPAA focus; less SMB
6	Sendblue	7.5/10	[PART] Channel-specific	[PART] Webhook	[YES] Flat rate	[YES] SOC2	Best iMessage channel add-on
7	GoHighLevel LC Phone	6.5/10	[YES] Agency only	[PART] Limited	[PART] Higher (Twilio base)	[PART] Shared rep	Good for agency distribution only
8	Sent.dm	5.5/10	[PART] Early stage	[NO] No native	[YES] Very low	[PART] Unproven	Watch list -- too early for primary
9	LinqApp	5.0/10	[PART] Channel-specific	[PART] Webhook	[NO] Expensive	[YES] V C-backed	iMessage alternative to Sendblue
10	ProTexting	3.0/10	[NO] SMS mktg only	[NO] None	[PART] Credits	[YES] 16 years	Wrong tool for AI Receptionist SaaS

Not Recommended for ResponseOS Infrastructure:

Vendor	Score	Reason
JustCall	4/10	Per-user pricing, not SaaS infrastructure -- wrong economic model
RingCentral	3/10	Enterprise UCaaS, not CPaaS -- no programmatic SaaS integration
OpenPhone / Quo	2/10	End-user business phone product -- not a developer infrastructure API
MessageDesk	1/10	Team SMS inbox UI -- no API for SaaS builders
TextMagic	1/10	SMS marketing tool -- no multi-tenant or AI integration capability

Vendor	Score	Reason
SimpleTexting	1/10	SMS marketing tool -- not designed for programmatic SaaS use

SECTION 12 -- 3-YEAR ARCHITECTURE RECOMMENDATION

Year 1 -- MVP (10-50 Clients)

Component	Plan
Primary Infrastructure	Telnyx (voice + SMS) + Vapi (AI agent layer)
Secondary / Backup	Twilio account maintained for failover and platform compatibility
SMS Channels	Telnyx A2P (primary) + Sendblue iMessage (US clients)
Architecture Pattern	Monolithic ResponseOS API wrapper around Telnyx + Vapi
A2P Strategy	Register 1 brand + campaigns per client via Telnyx; separate subaccounts
Revenue Target	10-50 clients at \$297-\$497/mo; gross margin 93-96%

Year 2 -- Scale (50-200 Clients)

Component	Plan
AI Agent Layer	Add Retell AI as secondary AI agent option (client choice of voice)
SMS Expansion	Evaluate Sent.dm for WhatsApp/RCS multi-channel routing
Architecture	Migrate to ResponseOS Communications Abstraction Layer (swap providers via config)
Billing	Per-client subaccount billing with usage metering and markup capability
New Channels	Add outbound AI voice campaign capability (Telnyx + Retell outbound)
Revenue Target	50-200 clients; explore \$997-\$1,497/mo enterprise tier (97-98.6% margin)

Year 3 -- Enterprise (200+ Clients)

Component	Plan
Carrier Evaluation	Evaluate Bandwidth or Sinch for carrier-grade enterprise SLA comparison
Custom SIP	ResponseOS-owned SIP trunks via Telnyx volume contract (1M+ SMS/mo pricing)
A2P Management	Own A2P 10DLC Brand/Campaign management at platform level (not per-client)
Telnyx Contract	Negotiate volume contract pricing at 1M+ SMS/mo and 500K+ voice min/mo
Verticals	Enter healthcare (HIPAA BAA), legal, and multi-location franchise verticals
Revenue Target	200+ clients; \$5M+ ARR; begin evaluating Series A infrastructure investment
